

EnviroTech Services Inc.'s ESI-Spray division has launched a new line of Mini-Spray Systems designed to provide advanced anti-icing and de-icing road treatment for bridges, parking decks, garages and roadways. The systems are similar to the division's existing systems, but they are constructed in a smaller, self-contained unit. Key benefits of the Mini-Spray System include spray coverage that offers 500 feet in each direction; push-button activation; an automatic low tank level shut off feature; system compatibility with most anti-icing and de-icing products; and spread spectrum radio remote control with 1,500 feet line-of-sight. The system also can be controlled and monitored through remote access via the Internet over a secure server. *Write 55 on Reader Service Card.*
