

Caliber M-2000™

FROM ENVIROTECH

Stockpile pre-treatment technology from EnviroTech

People Helping People Improve Their Environment

Caliber M-2000™ is a blended, corrosion inhibiting, high performance liquid product used for the pre-treatment of salt and sand. Caliber M-2000™ enhances the melting performance of stockpiles, reduces bounce and scatter, and keeps stockpiles free flowing, regardless of temperature.

DISTRIBUTED BY:

--

Performance

Caliber M-2000 delivers unmatched performance at colder temperatures, allowing for the use of salt at temperatures not previously possible. Caliber M-2000 is also less corrosive than any other products of its kind. It is over 90% less corrosive than rock salt, and over 80% less corrosive than magnesium chloride.

Uses and Applications

Treating a stockpile with 6-10 gallons of Caliber M-2000 per ton of granular material powerfully enhances the melting performance of the stockpile, particularly at colder temperatures. Caliber M-2000 can be applied to a stockpile in advance or as it is being delivered. Treating the entire stockpile prior to application to the roadway eliminates the need for pre-wetting saddle tanks.

Recommended application

One ton salt stockpile = 6–10 gallons of Caliber M-2000
One ton sand stockpile = 4–6 gallons of Caliber M-2000

Features and Benefits

- Increases the speed and effectiveness of salt
- Permits the use of salt at lower temperatures
- Increases penetration into ice and snow pack
- Prevents the stockpile from freezing or “clumping”
- Diminishes the effects of corrosion

Testimonials

“The roads where M-2000 was used achieved bare pavement faster than where we used straight salt. Overall we have been impressed with the results.”

Steve Zweber, Street Supervisor, Roseville, Minnesota

“Did not stick in chutes.”

“No snow pack ever developed.”

“This stuff works great! It does everything they said it would and more.”

Various Michigan Department of Transportation employees
