

Liquid de-icing technology from EnviroTech

People Helping People Improve Their Environment

MeltDown Liquid™ is a high performance magnesium chloride ($MgCl_2$) anti-icer and de-icer that delivers an improved melting capacity, resulting in longer lasting performance.

Performance

MeltDown Liquid has a low eutectic point that works effectively in a broad variety of temperature ranges. Its exceedingly high ability to dilute and hold water before refreezing improves the all-weather performance of this product. Additionally, MeltDown Liquid is among the least harmful of common de-icers to vegetation and groundwater according to independent studies conducted by the U.S. Department of Agriculture. It is non-irritating and safer to handle and less harmful to road surfaces and metals than road salt, when used as recommended.

Uses and Applications

Anti-icing

When applied prior to a storm, MeltDown Liquid helps prevent snow and ice from bonding to the road surface.

De-icing

When applied to black ice or frost conditions, MeltDown Liquid outperforms other liquid products. With repeated applications, even accumulated snow and ice pack can melt completely.

Testimonial

"I have had absolutely no damage to turf, concrete or asphalt since changing to this product, and I never hear complaints from housekeeping about tracking the material into the building. The application is simple."

Ted Williams, Loveland Good Samaritan, Loveland, Colorado

Features and Benefits

- Cuts road maintenance costs
- Eliminates use of sand
- Increases melting capacity
- Reduces the amount of product used
- Simplifies the application process
- Lowers impact on road surfaces and metals
- Lessens the impact on plants and vegetation
